Shift Decode:

(rs, r0) decode ([31:0] shifts into [63:32] and take [63:32]):

00 = left rotate

01 = right shift (32-ShfAmt = Right Shft Amt)

10 = left shift

11 = double shift (upper A-op shifts into lower B-op)

===> "left rotate" of zero gives zero shift (therwise zero amount signifies indirect shift)

ALU-OP decode:

| 0000 = B | 0100 = ~A&B (~and) | 1000 = A-B | 1100 = A + B(8) |
|--------------------|--------------------|------------|------------------|
| 0001 = -B | 0101 = XOR | 1001 = B-A | 1101 = A + B(16) |
| 0010 = A&B (and) | 0110 = OR | 1010 = | 1110 = A+B |
| 0011 = A&~B (and~) | 0111 = mul-stuff | 1011 = | 1111 = A+B+Cin |
